THINK-ONOMICS-III

Overview of 'pathways from smart to wise', in cities, economies, environments, technologies, governance

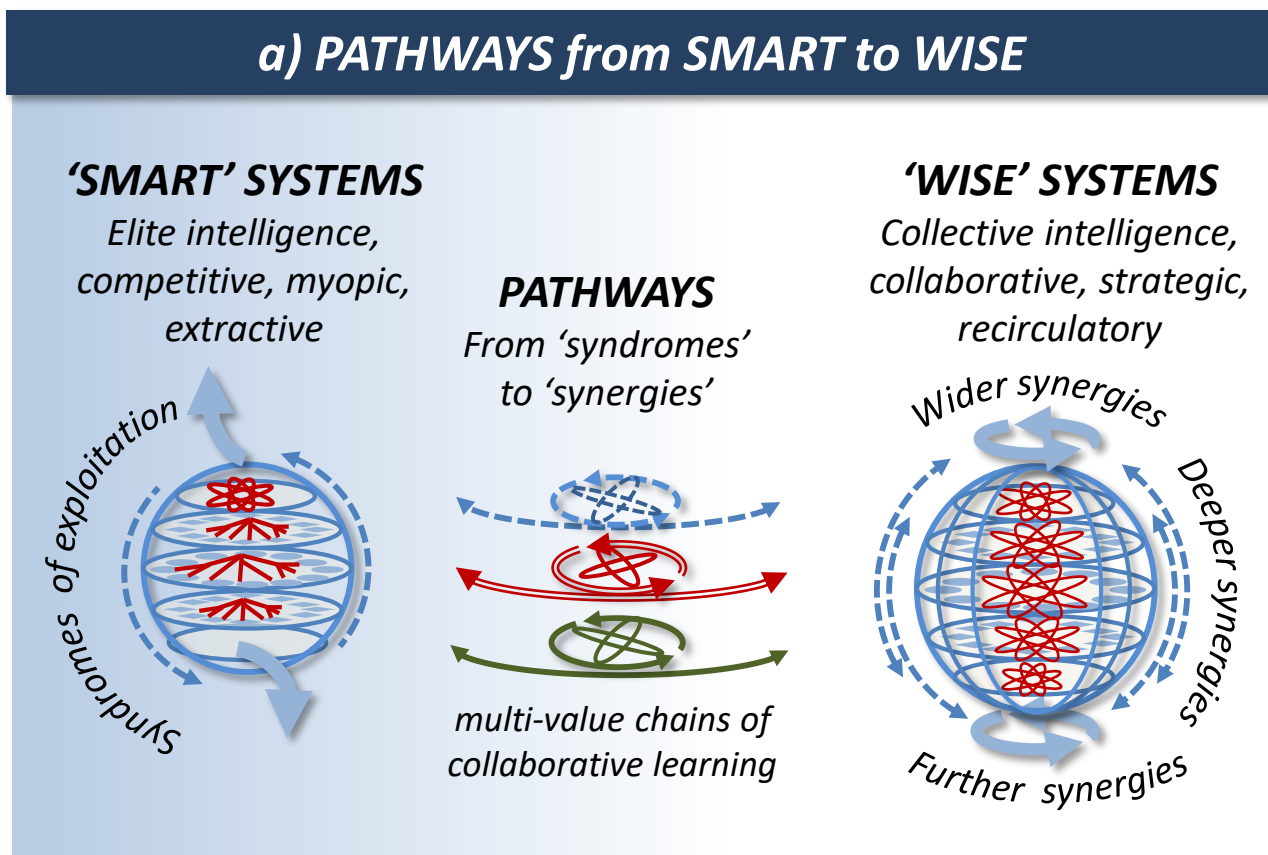

Our city's problems are deeply complex...

...while our policy is '**clever**' but simple

...and business is '**smart**' but myopic

So we need a '**wiser**' kind of collective intelligence

And then we map the pathways 'from smart to wise'

b) 'CLEVER' THINKING-I

Clever thinking works for functional problems

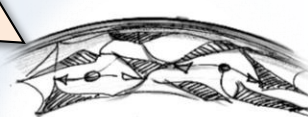

Simple dictatorship & smoke-stack industry

c) 'SMART' THINKING-II

Smart thinking is creative but fragile & myopic

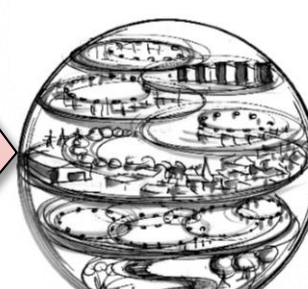

Elite democracy & advanced production & consumption

d) 'WISER' THINKING-III

Wiser thinking is networked for deeper complexity

Networked democracy & co-creation of social, eco, cultural value

e) LINEAR SYSTEMS-I

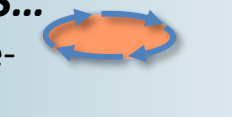

CITIES...
mono-use & machine scale

ECONOMIES...
industrial take-make-dump

ECOLOGIES...
local extraction & pollution

TECHNOLOGIES...
functional single-loop learning

POLITICALS...
command & control

f) EVOLUTIONARY-II

...mono-use & extractive

...speculative take-make-dump

...global extraction & pollution

...smarter double-loops

Governance by & for elites

g) CO-EVOLUTIONARY-III

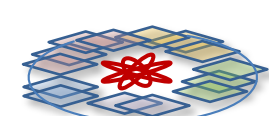

...multi-use & human scale

...collaborative & recirculatory

...local-global recirculation & stewardship

...wiser multi-loop learning & thinking

Co-governance by & for community

NEXUS-CONNEXUS

Figure
2-2

Grand challenges & transformations, from a 'nexus' of syndromes, to a 'connexus' of synergies

Challenges & syndromes

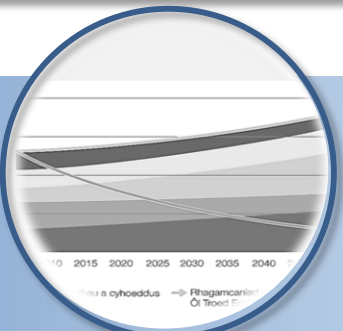

'Deeper threat multipliers' lead to multiple breakdowns

Rampant inequality feeds violence

Migration, extremism, intolerance

Climate & eco-footprint projections

Climate chaos of 2 / 4 / 6 degrees

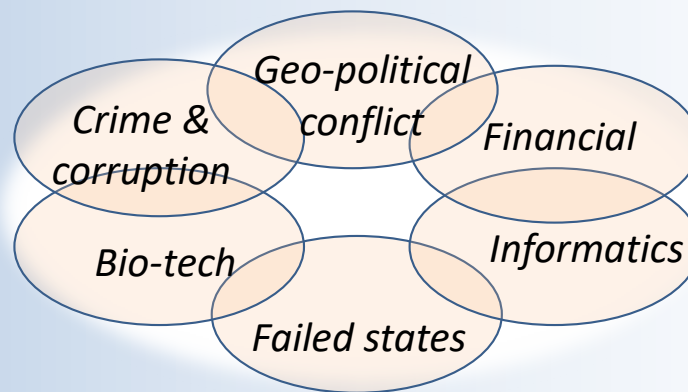

Cities as frontiers & flashpoints

Total hyper-connectivity & elite control

a) GEO-POLITICAL-ECONOMY NEXUS

Hyper-digital lifestyles & experience

Opportunities & synergies

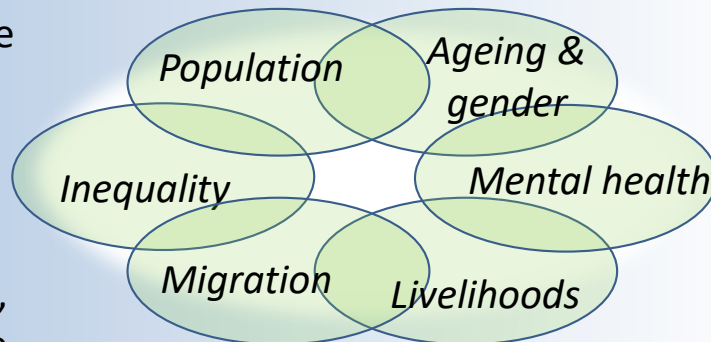

Bio-tech & trans-humanism

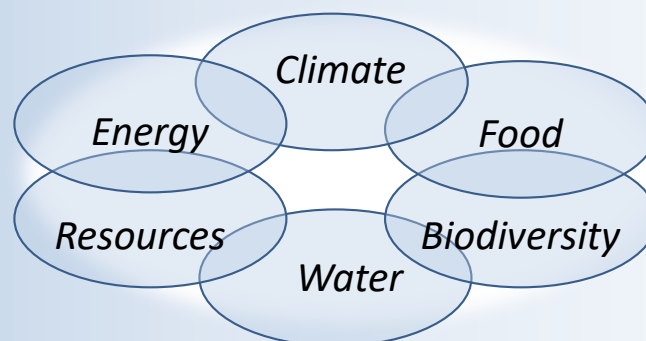

Ageing & social transformation

b) SOCIO-CULTURAL NEXUS

c) BIO-SPHERIC NEXUS

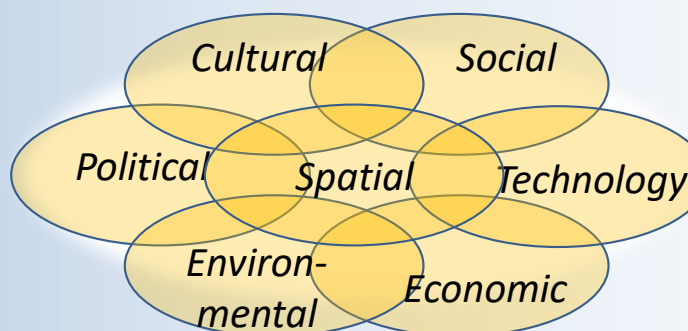

Climate & eco-footprint transitions

Food / energy / water integrated systems

d) COGNITIVE NEXUS

CHAI
(Collective Human - Artificial Intelligence)}

Psycho-cultural actualization

(the definition of all the circles here is not fixed & depends on issues to be addressed)

**Figure
2-3**

CITY-STATE-PLANET

Outline of case studies on three levels: city-region, city-state, city-planet

a) POST-INDUSTRIAL CITY-REGION

'Manchester' / 'MCR' (incl. Greater Manchester population 2.7 million)

Manchester as work in progress...

Science-tech innovation in park & campus:

Socio-cultural innovation in the neighbourhood:

Eco-social innovation in the hills & woodlands:

Policy innovation: 'Devo-Manc', low carbon, "inclusive growth", 'Wigan model'

b) POST-COLONIAL CITY-STATE

UK – urbanized island nation in 4 parts, population ~60 million

UK as work in progress...

With pros – mature economy, multi-cultural society, green environment, post-colonial soft power

... and cons – class hierarchy, stagnant economy, hostile welfare state, financial hijack, and deeper divisions...

- Metro / provincial
- Younger / older
- Skilled / unskilled
- Secure / precarious

c) POST-EVOLUTIONARY CITY-PLANET

Earth – a small watery urbanizing planet, population 7-10 billion

Earth as work in progress...

Evolutionary history points to a 'Gaia Hypothesis'

Co-evolutionary prospects point to an 'Athena Hypothesis'

So humans now have a choice –

'co-destruction' - or - 'co-evolution'

3 smart / unsmart global systems:

Finance has evolved for predatory extraction.

Informatics is hijacked by dark power & money.

Production for profit by addictive materialism.

Also many **deeper threat multipliers** – climate, digital, bio-tech, mental illness, extremism, nationalism...
